## Séminaires de l'IDRIS

MULTICORE AND MASSIVELY PARALLEL SYSTEMS AT IBM

*Jeudi 12 février 2009 (10h30-12h)*

Luigi BROCHARD  
Société IBM

*IBM has developed since many years both massively parallel and multicore systems. These technologies were originally implemented in different systems but as time goes by, we see those technologies being merged into the same system while their degree of parallelism is increasing.*

*This conference will describe both from a hardware and software perspective why IBM started to develop such systems in 2004, where we are now and what these systems may look like in the future.*

**Dr. Luigi Brochard, Distinguished Engineer, HPC Development, IBM System and Technology Group.**
